

I heartily support RM-10811.

This petition provides for preservation of future bandwidth and encourages the continued development of Amateur Radio Operator's skill in the use of Morse Code.

The existence of a large number of skilled Morse operators is a critical part of the ongoing efforts to preserve and protect Homeland Security.

In times of crisis and under emergency conditions, Morse Code proficiency coupled with an active Amateur Radio emergency communications network has always proven to be the most reliable and robust method of point to point and broadcast communications.
